**ENEL GREEN POWER: THE FIRST PPA EVENT WAS SUCCESSFULLY COMPLETED**

- *The corporate event "Green PPAs: Towards a green sustainable energy for your business" was successfully completed.*

**Athens, June 28, 2022** - The corporate event of Enel Green Power on "Green PPAs: Towards a green sustainable energy for your business" was completed with notable success yesterday. The event was held on the company's initiative, in order to provide information about its activities and the benefits that businesses may have from its services.

The purpose of the corporate event was to bring together the executives of Enel Green Power from Greece and abroad with executives of the domestic large industry electricity consumers. Given the difficult circumstances that the energy market has been experiencing in recent months, the event achieved its goal, which was to inform and raise awareness to businesses about the solutions that Renewables can offer in the long term.

Enel Green Power, one of the largest Renewable Energy companies in Greece, took the initiative to invite executives and representatives from all major energy-consuming industries of the country to a special corporate presentation. During the event, Enel Green Power executives had the opportunity to inform distinguished representatives from all sectors of the domestic industrial consumer market, among them Energy Managers, Financial Managers and Directors of procurement departments, about the Company's long-standing, international experience in long-term green energy contracts. The event presented the following subjects in detail:

- Green PPAs and Green Sustainable Energy for Businesses
- The advantages that PPAs offer to consumers and producers
- The risks that each side must assess
- The ways in which green PPAs will be adapted to the needs of the Greek market along with the necessary changes of the regulatory framework, so that they constitute a viable and clean environmental solution that helps stabilize electricity prices and, at the same time, a stable environment for the development of new Renewable Energy plants.

Enel Green Power facilitates the smooth energy transition of businesses to a zero-emission economy, utilizing Renewable Energies, in line with the UN Sustainable Development Goals. At the same time, it helps companies seize business opportunities by offering reliable, competitive, personalized energy solutions from renewables, with an emphasis on sustainability at every stage of the process.

Further emphasis was placed on the presentation of the Company's vision and planning, with a focus on the further development of Renewable Energy projects in the Greek territory, while there was also discussion of new possibilities of joint actions for the promotion of sustainability and Creating Shared Value
